

CYBER SECURITY

DID YOU KNOW..?

75%

Only 75% of people know that information entered into a website is encrypted when the URL contains "https://"

49%

49% of people can't recognise two-step authentication.

27%

27% of people don't know that a phishing attack is a malicious attempt to get a user to click on a link or file by impersonating a trusted source.

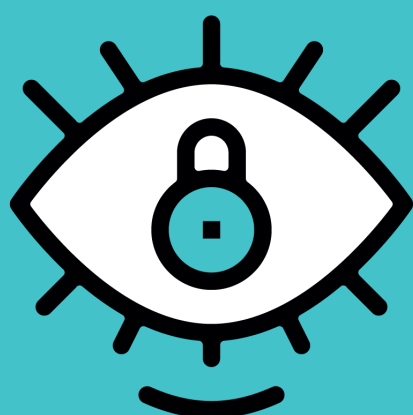

52%

52% of people aren't aware that the strongest passwords contain a mix of capital letter, numbers and special characters.

33%

Only 33% of people know that internet service providers can still see details of a user's web traffic from private browsing.

90%

90% of people don't know that your smartphone can still be tracked if you turn off the GPS function.

16%

Only 16% people know that using a public Wi-Fi network with password protection doesn't mean that your network is safe or secure.
