

SEPSIS

THE FACTS

42% of the public in great Britain have not heard of the term sepsis.

Over 70% of cases of sepsis arise in the community and yet a large proportion of the public do not recognise the symptoms.

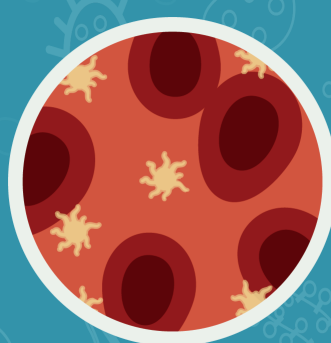

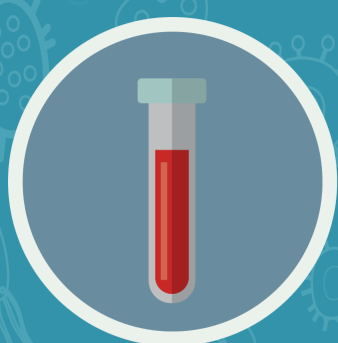

Every year in the UK there are **150,000** cases of sepsis, resulting in a staggering 44,000 deaths, more than bowel, breast and prostate cancer combined.

Sepsis can be triggered by an infection in any part of the body.

The APPG* on sepsis has recommended training in recognition and management of sepsis to be mandatory for all hospital medical and nursing staff.
